

Product Description: Gunnebo/Johnson has adapted their BKT style Shank Hook to fit Harrington Hoist products. The BKT's shank is machined to fit Harrington's hook yoke. It simply replaces the standard Harrington hook. According to Gunnebo's literature, the BKT features:

- The release trigger will only operate when hook is unloaded.
- The hook will not open under load.

Application Notes: The BKT is suitable as either a top or a bottom hook. As a bottom hook it can be used on hoists with either single or multiple falls of chain. A special yoke is required when used on products that have riveted yokes as standard. The BKT is useful for applications where it is desired to have a positive captivation of the load in the hook's saddle. Under load the BKT essentially is locked in the closed position thereby helping to prevent the escape of the load from the hook's saddle.
