

Purpose:

Document the maximum lift and basic information for chain containers used on Harrington manual chain hoist.

Container Information:

- Chain containers are available in three basic sizes; 05, 10 and 15.
- Containers are constructed from vinyl coated canvas with a steel frame on top.
- The containers are prepared differently depending on the hoist model.
- CF and (G)NTH model hoists must be disassembled to install a container and must be load tested after assembly. The containers should be installed by Harrington or a competent repair company capable of performing load tests.
